The Educational Remodeling Tour

Alternative Countertop Options

H12: 5532 Richmond Curve | Designer: Elizabeth Bland

Project Type: Kitchen

Here at Castle we pride ourselves in providing the best value in remodeling. With that comes providing the best. With the Green Movement in mind we set out to provide the leading brands in green countertops. Not only do you get great looking countertops, but you know they are environmentally friendly as well.

Wood from the Hood

Wood From The Hood produces high quality lumber and other wood products from the Twin Cities area "Urban Forest". By reclaiming trees in our local area, WFTH can produce high quality products from a sustainable resource and take one more step toward environmentally sensitive building and remodeling. They offer custom kiln drying and milling to your specifications, in addition to stock lumber and flooring. Unique projects utilizing thick, thin, book matched and wide single boards are our specialty. Products from flooring to millwork, furniture, mantles, picture frames, cutting boards and artistic wood crafting are only some of the uses for this rich resource that until recently, may have been in front of your home. All of their lumber can be tracked to the zip code where it was harvested from. In special cases it can be tracked to a specific address.

Butcher Block

Butcher Block countertops are furniture made to last a lifetime. This traditional countertop is often used for utility tables for kitchen workspaces and are highly customizable with many species of wood and looks available. Durable and long lasting butcher block remains popular.

PaperStone

PaperStone® is a sustainable composite material made from 100% post-consumer recycled paper, our own PetroFree™ phenolic resins and natural pigments. As PaperStone® ages it will assume a pleasing, lustrous, seasoned appearance that is an inherent characteristic of the material. This is a natural progression of a natural product, resulting in a beautifully soft, rich patina. The aging process takes time and, much like fine hardwood, a deep luster will develop in areas of heavier use.

Nuxite

Nuxite is made from crushed walnut shells suspended in a zero VOC resin binder. Walnut shells are a sustainably grown and renewable byproduct of annual walnut food crop harvests which impart their characteristics of high density, low absorption, and light weight to Nuxite.

Dakota Surfaces

Dakota Surfaces produces and installs environmentally friendly custom countertops made from crushed, recycled glass in a zero-VOC epoxy resin. Dakota Surfaces also produces award winning concrete countertops using an advanced UV-cured sealing system. Design your own countertops with 100% customizable glass, aggregate, and background colors to choose from.
